ABSTRACTED-PUB-NO: US20020058055A

BASIC-ABSTRACT:

NOVELTY - A cosmetic or pharmaceutical system comprises an oil-containing biliquid foam dispersed in a salt-containing aqueous phase. The aqueous phase has a pH of less than 7, and is gelled by a polymeric sulfonic acid.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a method of thickening a composition comprising biliquid foam dispersed in salt-containing aqueous phase by gelling the aqueous phase with polymeric sulfonic acid.

USE - The system is used as base for colored cosmetic products e.g. foundation, blush, eyeshadow, and eyeliner; in hair care products e.g. shampoo and conditioner; and in skin care products e.g. cleanser, conditioner, moisturizer, and anti-aging formulation. It is also used for delivery of cosmetic actives e.g. exfoliation agent, anti-acne agent, antiperspirant, skin-lightening agent, and depigmenting or self-tanning agent; and of pharmaceutical actives for topical use e.g. antibiotics, wound-healing agent, antipsoriatic agent, antiviral agent, antioxidant, analgesic, anesthetic, anti-dandruff agent, antidermatitis agent, antipruritic agent, anti-inflammatory agent, antihyperkeratolytic agent, antiseborrheic agent, antihistamine agent, and vitamins.

ADVANTAGE - The gellant creates a homogeneous gel that is stable at pH below 7, and applies to the skin in a smooth, aesthetically elegant manner, without pilling, even in the presence of electrolytes, e.g. at least 3%.
